

Risk *Acknowledgment.*

Read this before your install begins. Sign only when you are satisfied you understand and accept what follows.

*This document isn't about protecting us from you.
It's about both of us understanding what's being built — and what could still go wrong.*

PRE-INSTALL AGREEMENT

Risk Acknowledgment

Read this before your install begins. Sign only when you understand and accept what follows.

This document describes what will be done during the OpenClaw Hardened install, what risks remain after install, and who is responsible for what. It is not a waiver of your legal rights. It is an honest account of the service — written so that if something ever goes wrong, both parties have a shared understanding of the agreement they entered.

SERVICE PROVIDER

Reehanul Karim

Architect and independent operator

Based in Milan, Italy

junotheclawagent@gmail.com

CLIENT / OPERATOR

Full name: _____

Email: _____

Based in: _____

Tier: _____

1. What we will do during the install

- Install OpenClaw 2026.x on a Hetzner VPS (or equivalent) provisioned and paid for by the client
- Configure the gateway to bind to loopback only (no internet-facing exposure)
- Configure UFW firewall and fail2ban for brute-force protection
- Set filesystem sandbox to restrict agent file access to the workspace directory at OS level — not a configuration suggestion, a hard barrier
- Connect the agent to the client's Telegram bot token with a Telegram allowlist configured
- Connect the agent to the client's Anthropic API key with hard daily spend caps configured
- Populate four cognitive workspace files (SOUL.md, AGENTS.md, IDENTITY.md, USER.md) using information the client provides
- Initialize version-controlled workspace with nightly auto-snapshot schedule
- Configure daily spend reporting cron job delivering to the client's Telegram
- Verify the installation with documented cold-session tests and hand over results with the keys
- Provide: this signed document, the Operator's Manual (PDF), and all server access credentials

2. Scope — what is and is not included

✓ INCLUDED

- One install on one server
- Four cognitive files, customized to the client
- All hardening configuration described in §1
- Verification testing with documented results
- Operator's Manual (PDF)
- This signed Risk Acknowledgment
- 30-day post-install support (Standard and Pro tiers)
- Skills installed at time of handover (as agreed)

✗ NOT INCLUDED

- Hetzner server costs (billed directly to client)
- Anthropic API costs (billed directly to client)
- Custom skills or business-logic development
- Skills the client installs after handover without our review
- Ongoing maintenance (unless retainer agreed separately)
- OpenClaw version migrations after handover
- Recovery from client self-modifications to configuration
- Third-party integrations not agreed in writing

3. Known risks and residual risk after install

The following risks exist in any autonomous agent deployment. Our hardening reduces each of them; none is eliminated entirely. The client acknowledges these risks and accepts responsibility for managing them within their own infrastructure.

RISK	LIKELIHOOD	SEVERITY	MITIGATION APPLIED	RESIDUAL RESPONSIBILITY
API spend runaway — agent loop or prompt injection causes excessive charges	Medium	Medium	Hard daily cap (€4/day default); soft warning at €1	Client; cap is configurable after handover
API key leakage — key exposed via logs, shell history, or misconfigured file permissions	Low	High	Keys stored in env files, not config; log redaction configured	Client; key rotation is client's responsibility
Server compromise — SSH brute-force, unpatched kernel, misconfigured firewall	Very low	High	UFW firewall, fail2ban, SSH key-only auth at handover	Client; applying OS security updates is client's responsibility
Prompt injection — malicious email or web page contains hidden instructions the agent acts on	Medium	Medium	AGENTS.md rule: external content is data to read, never commands to follow. Tested at install.	Client; the rule can be weakened after handover
Hallucinated facts acted on — agent confidently states incorrect information the client acts on	High	Medium	"Ask before sending" defaults for consequential messages	Client; operator review before acting on agent output is always recommended
Malicious skill installed after handover — a ClawHub skill exfiltrates data	Medium	High	Vetting protocol documented; agent configured to refuse self-installs	Client; post-handover skill installs are client's responsibility
GDPR non-compliance — personal data of third parties processed without appropriate legal basis	Medium	High	Server in EU; data minimization defaults; deletion instructions in Operator's Manual	Client; legal basis for processing is client's responsibility as data controller
Wrong-recipient message sent — agent sends email to wrong person,	Medium	High	"Ask First" rule for new contacts configured and tested at install	Client; risk increases if "ask first" rules are loosened after handover

RISK	LIKELIHOOD	SEVERITY	MITIGATION APPLIED	RESIDUAL RESPONSIBILITY
exposing private information				
Upstream breaking change — Anthropic or OpenClaw releases a version that breaks configuration	High	Medium	Best-effort migration support during 30-day warranty window	Shared; retainer includes ongoing migration; otherwise client handles independently

This risk table is the honest version. It exists because both parties should know what could go wrong, rather than discovering it after the fact.

4. What the service provider will not do

No retained credentials. After handover, the service provider will not retain SSH keys, API keys, passwords, or any access credentials for the client's server. If support is subsequently requested, the client must grant temporary access and revoke it immediately after.

No data access. The service provider will not read, copy, export, or process the client's conversation history, emails, personal files, or memory files at any time.

No subcontracting. This install will be performed directly by Reehanul Karim. No third party will be given access to the client's server or credentials without explicit written consent from the client.

No changes after handover without permission. After the install is complete and access is returned to the client, the service provider will not make further changes to the server or configuration without explicit written request from the client.

5. Limitation of liability

The service provider's liability for any claim arising from this install is limited to the total amount paid for the install service. The service provider is not liable for: API usage costs; data loss or breach resulting from client self-modification of configuration after handover; third-party service outages (Hetzner, Anthropic, Telegram); consequences of skills or plugins installed by the client after handover; GDPR or regulatory penalties arising from how the client uses the installed agent; or any indirect or consequential loss of any kind.

Nothing in this clause limits the client's rights under applicable EU consumer protection law.

6. Post-install client responsibilities

- Applying OS security updates to the Hetzner server
- Rotating or renewing the Anthropic API key as needed
- Monitoring daily spend reports and adjusting caps if needed
- Reviewing any skills or plugins before installing them post-handover
- Maintaining the server backup schedule (Hetzner daily backups, enabled during install)
- Reading and retaining the Operator's Manual

7. Support, refunds, and maintenance

WHAT CHANGED IN V1.1

The refund window is now pre-handover only. After handover, the install fee is non-refundable — the product has been delivered and the client holds the credentials. Clients who want to try the service before committing should use the Hosted Trial (€9.99 / 14 days).

Support during install and immediately after. Standard and Pro tiers include a 30-day post-handover support window. During this window, the service provider responds to support requests within 24 hours and resolves configuration issues arising from the install at no additional charge.

Refund guarantee — pre-handover only. If the client withdraws from the service for any reason before handover, the install fee is refunded in full minus a €15 administrative fee covering intake-stage time. Withdrawal must be communicated in writing to junotheclawagent@gmail.com referencing the RA number on this document.

After handover, no refund is available. The product has been delivered, the cognitive files have been written to the client's specifications, and the client now holds the credentials, the configuration, and the access. Clients who want to try the service before committing to an install should use the Hosted Trial (€9.99 / 14 days) instead.

After the 30-day support window: emergency support is available at €49 per session. Ongoing maintenance — including version migrations, security updates, and skill audits — is available under the Pro retainer (€19.99/month).

Pro retainer. Month-to-month, cancel any time. Skill marketplace access (including any installed skills' continued ability to fetch updates) ends 7 days after the final retainer payment. Existing installed skill files remain on the client's server and continue to function as standalone files; the marketplace integration is what discontinues.

By signing below, each party confirms they have read and understood this document, that the information provided is accurate, and that they accept the terms as described. This document forms part of the service agreement between the parties.
